

## **TINAMU – the innovative Swiss drone software provider appoints new CEO**

TINAMU, the pioneering ETH Zurich spin-off enabling drones to fly indoor autonomously, without GPS, announces a management transition to enter its next growth phase. Tobias Nägeli, founder and current CEO, is passing on the reins to Thomas Götschmann, effective May 1<sup>st</sup>, 2024. "I am excited to join TINAMU as CEO to build together with Tobias and the talented team of robotics and computer vision engineers a global deep-tech based at the heart of the Swiss robotics hub in the greater Zurich area." expressed Thomas Götschmann.

TINAMU established itself as a leader for bulk material inventory, winning multinational companies as first customers. "As we are getting ready for growth, I am delighted to announce the transition of CEO responsibilities to Thomas" says Tobias. "Thomas is the ideal leader to accelerate TINAMU's growth strategy and foster the development of a scalable organization." Tobias will take over the CTO/CPO role and focus on his passion to develop innovative products. All existing funds, [Alpana Ventures](#), [DAA Capital Partners](#), [Spicehaus Partners](#) as well as private investors have contributed to win Thomas as new CEO and to fund the next growth phase.

### **New CEO to push next growth phase:**

Thomas Götschmann, a 43-year-old Swiss, brings a wealth of experience and entrepreneurial expertise to his new role as CEO of TINAMU. Thomas is a serial entrepreneur and experienced company builder, embarked on his career in Corporate Finance / M&A (EY) and Management Consulting (BCG). From 2019 to 2022, Thomas successfully built up global operations for Auterion the leading drone operating system. At the heart of Thomas's approach lies a passion for creating value and impact, centered around people and pragmatic solutions.

### **Automated Inventory Monitoring for 24/7 visibility over warehouse inventory. No pilot required.**

TINAMU is an innovative drone software provider, an ETH Zurich spin-off, enabling drones to fly indoor autonomously without any need for a pilot (computer vision-based navigation). TINAMU provides an end-to-end automation solution allowing supply chain and operations managers to get trust, visibility and control over their inventory in the cloud at the push of a button. Today most stockpile inventories are done manually on paper, generating inaccuracy, errors, and safety risks. TINAMU allows cost, resource and carbon emission savings through better production and logistics planning based on up-to-date inventory data; digital, safe and automated. TINAMU, trust through Technology.
